

# EVVRA

European Vapour Recovery Association

**Together stronger in a new market**

## **EVRA**

### **Together stronger in a new market**

**uncontrolled emissions to the atmosphere is a growing problem in urban and industrial areas.**

**This brings along a new market at national and international level. Which issues are involved, which new solutions does the market require and how can you be successful in this?**

**Producers and service providers in the field of vapour and odour processing have therefore committed themselves in the European Vapor Recovery Association (EVRA).**

#### **The reason**

International efforts are taken to harmonize legislation in the field of vapour and odour processing. Particularly in the Rhine-Danube region (Germany, Belgium, Luxembourg, France, Switzerland and the Netherlands) vapour and odour processing is an issue that is developing rapidly. For example, in the Netherlands there is already a ban on inland navigation on the degassing of residual charge vapours from benzene. Since 1 January 2016 this also applies to certain other benzene-containing hydrocarbons.

#### **EVRA: together stronger in a new market**

Governments and Business: due to stricter legislation and regulations, new technologies and solutions in the field of vapour and odour treatment are being developed. Health complaints, safety risks and adverse environmental effects: Governments make use of the knowledge, efforts and solutions of specialized producers and service providers .

#### **Why EVRA?**

A market in rapid development requires an industry with a professional image. EVRA has been created for this. As a platform where members share knowledge, indicate developments and reinforce each other. But also as an instrument to position our industry as a key player toward Government and businesses and to advise on regulations and standards. Naturally, EVRA serves the (business) economic interests of its members.

## What can you expect from EVRA?

- ◆ A European platform where manufacturers and service providers of vapour processing and odour reducing solutions meet and share knowledge.
- ◆ A European platform where manufacturers and suppliers of related services and products can participate with the latest developments.
- ◆ An innovation platform for knowledge centres and educational institutions that want to participate in new developments
- ◆ To promote the interests of its members to industry, National governments and European institutions in the field of Environment, Health and Safety.
- ◆ Active participation in policy issues in the field of vapour and odour reducing solutions in Europe.
- ◆ Acting as an interlocutor and lobbyist to National and International authorities in the context of environmental solutions.
- ◆ Sharing relevant information regarding the markets in which you operate as a member
- ◆ Support and advice with regard to business topics of its members
- ◆ Development and maintenance of certification of vapour and odour processing installations (National and European quality certificate)
- ◆ Develop and provide certified training of:
  - VRU operator
  - VRU analyst

## What does EVRA expects from your organization?

The EVRA helps members to be successful in new markets in their own country and Europe. An important condition for participation is that you are enterprising and that you are willing to cooperate and share knowledge. EVRA issues views on behalf of the participating companies. We expect you to actively contribute to the activities of the trade association. Together with the other participants. This can be done in specialist workgroups that are composed based on your knowledge (certification, measuring, etc.).

## ★ How to become a member?

You can register via our website, [www.e-vra.eu](http://www.e-vra.eu) or you can contact us via our contact email address [info@e-vra.eu](mailto:info@e-vra.eu). Of course, calling is also possible, +31 6 1056 1959.

## ★ Type of membership

- ◆ Full member; For manufacturers, suppliers and service providers of vapour processing and odour reducing solutions.  
Annual contribution € 2,500
- ◆ Associated member; For suppliers of products and / or services associated with air emission reducing companies.  
Annual contribution € 1,500
- ◆ Innovative member; Universities, educational institutions, research agencies, knowledge institutes, inventors, trade journals.  
Annual contribution € 750
